

DMARC Domain Checker

Use our **DMARC Domain Checker** to quickly find out if a domain is properly protected against phishing, spoofing and domain abuse. This tool inspects DMARC, SPF and DKIM records to see if any issues are present.

hilton.com

CHECK DOMAIN

You have a valid DMARC record that provides visibility into the entirety of your email program(s) and helps ensure you meet email sending best practices. Your domain however is not fully protected against abuse as it does not take full advantage of the protection

afforded by DMARC.

The checks performed here are similar to those done by mailbox providers such as Google, Yahoo and Microsoft. DMARC, SPF and DKIM records live in your domain's DNS and are used by mailbox providers to separate legitimate email from abuse. Based on your DMARC policy, receivers are currently *not* able to block fraudulent emails that mimic your domain.

[GET STARTED](#)

DMARC

Your domain has a valid DMARC record and it is set to p=quarantine. To fully take advantage of DMARC, the policy should be set to p=reject.

Details

```
v=DMARC1;p=quarantine;fo=1;rua=mailto:dmarc_rua@hilton.com;ruf=mailto:dmarc_ruf@hilton.com
```

To understand and fix the specific errors, use our [DMARC Inspector](#).

SPF

Great job! You have a valid SPF record, which specifies a hard fail (-all).

Details

```
v=spf1 include:spf.protection.outlook.com include:_spf-  
a.hilton.com include:_spf-b.hilton.com include:_spf-  
c.hilton.com -all
```

To understand and fix the specific errors, use our [SPF Surveyor](#).

DKIM

We found at least one DKIM valid record. It's likely that you have others as each email sending source should have its own DKIM keys. DMARC visibility can help you discover each of your DKIM keys and much more.

Details

```
v=DKIM1; k=rsa;  
p=MIIBIjANBgkqhkiG9w0BAQEFAAA0CAQ8AMIIBCgKCAQEAyIR5SLtVvsU
